

Harbor Bulletin, First Quarter

The harbor offices keep a single working rule that has survived three directors and a fire: write the sea down as it is, not as you wish it were. Every chart, every log, and every line of the bulletin below follows that rule.

The plate accompanying this page is a reduced copy of the surveyor's weathered original, kept for the record because the paper will not last another winter.

The original chart, reduced for the bulletin.

Datum line: mean low water. Soundings in meters.

The plate has been in storage since the spring survey.
